

## NATURAL BROWSE PROTECTION FROM SEEDLING TO MATURE TREE

TRICO®, a sustainably sourced solution, repels deer, elk, and moose while protecting your seedling investment without the time, effort and added expense of physical barriers.

As the professional standard, TRICO® safely protects seedlings, shrubs and trees against browse by its dual action and long-lasting protection. By effectively repelling wildlife, TRICO® guards yields and reduces the need to replant, saving time and resources.

Suitable for spring or fall planting, apply TRICO® in the nursery or in field to ensure your trees and shrubs are protected from the moment they are planted. Harmless to people and animals, the specially developed concentrate formula enables quick and easy application, keeps wildlife away by smell and taste, provides long-lasting protection leading to higher production.

With nearly two decades of commercial use across 21 European countries and North America, TRICO® has demonstrated proven performance in more than 70 field trials. Contact us today to learn more about this tried and tested solution to help you increase your production.

## Product Features & Benefits

### Proven Effectiveness

Prevents deer, elk and moose browse

### Safeguards Crops

Eliminates need to replant

### Dual Action Mode

Deters wildlife through smell and taste

### Flexible Growth Stage

Apply in nursery or in field

### Species Compatibility

For use on a variety of species

### Long-Lasting Protection

Up to six month protection

### Efficient Use

Ready-to-use concentrate spray

### Rain Resistant

Upon application, once dried

# TRICO® Provides Effective Control of Deer Browse

An evaluation of the effectiveness of TRICO® to repel deer from feeding on young red oak nursery plants compared to Plantskydd Deer Repellent and untreated control treatment was conducted fall 2017.

The result, TRICO® significantly reduced the number of plants injured and reduced the amount of shoot injury by deer.

Picture 1 shows forested area that serves as a food source for deer. Pictures 2 and 3 are of an oak plot and individual TRICO® treatment applied only to tops of plants on Nov. 2017.

## Comparison of TRICO® and Plantskydd applied for protection of oak plants against deer injury.

Table shows percentage of plants injured by deer and evaluates the proportion of shoots injured by deer.

Treatment	Plants Injured Mean (%)	Shoots Injured Mean (%)
TRICO®	10.9	0.41
Plantskydd	21.5	0.64
Untreated check	43.8	1.54
<b>Odds ratio of injury</b>		
Plantskydd vs. TRICO®	2.24	1.55
Untreated vs. TRICO®	0.16	0.26
Untreated vs. Planskydd	0.35	0.41

## TRICO® TRIAL AT SAYWARD, B.C. (September 8, 2020 - May 18, 2021)

An efficacy trial of TRICO® was designed to determine if there was a significant difference in the amount of browsing of newly planted western red cedar by Roosevelt elk (*Cervus elaphus roosevelti*) and Columbian black-tailed deer (*Odocoileus hemionus columbianus*) between untreated seedlings, seedlings treated with Plantskydd®, seedlings treated with TRICO® USA and seedlings treated with TRICO® EU.

Results showed statistically significant treatment effect in terms of the amount of browsing of newly-planted western red cedar seedlings.

### Average % of red cedar seedlings nibbled, bitten or pulled by treatment
