

## PROTECT YOUR CROPS AGAINST WILDLIFE

TRICO® is a naturally-sourced solution to prevent browsing by deer, elk and moose. TRICO® safely protects agricultural crops, vegetables, vineyards, orchards and berries through its dual mode of action and long-lasting protection.

The specially developed concentrate formula enables quick and easy application onto crops, plants and fruit trees. Harmless to people and animals, TRICO® keeps wildlife away by smell and taste and once dried on the plant provides extended control. By effectively repelling wildlife, TRICO® guards yields and reduces the need to replant, saving time and resources.

With nearly two decades of commercial use, TRICO® is the professional standard across 21 European countries and North America. TRICO® has demonstrated its proven performance in more than 70 field trials.

Contact us today to learn more about this tried and tested solution, and how it can help you increase your harvest.

## Product Features & Benefits

### Proven Effectiveness

Prevents deer, elk and moose browse

### Safeguards Crops

Eliminates need to replant

### Dual Action Mode

Deters wildlife through smell and taste

### Flexible Growth Stage

Apply before flowering

### Plant Compatibility

For use on a variety of crops

### Effective Control

Up to 1 month protection

### Easy Application

Array of concentrate dilution ratio's

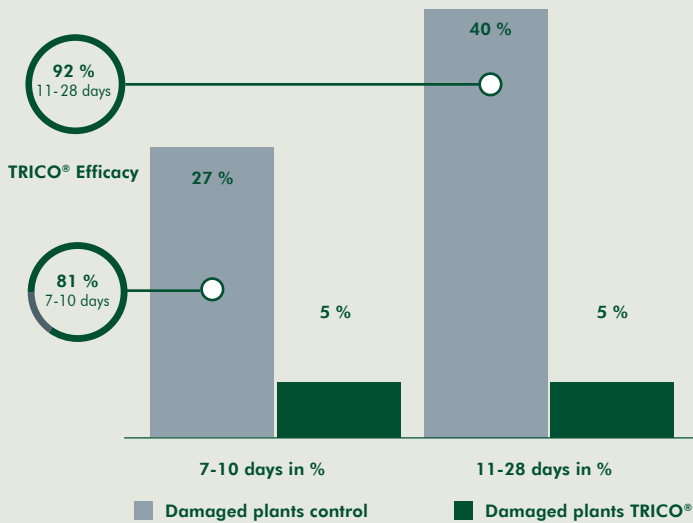

### Rain Resistant

Upon application, once dried

# Research Highlights

## TRICO® Ensures Crops Grow Undisturbed

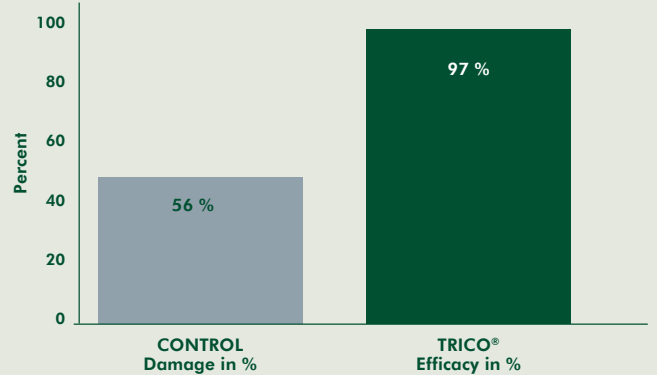

### TRICO® FIELD CROP PROTECTION (Corn)

# Grapevine Protection

## TRICO® protects vines against game browsing

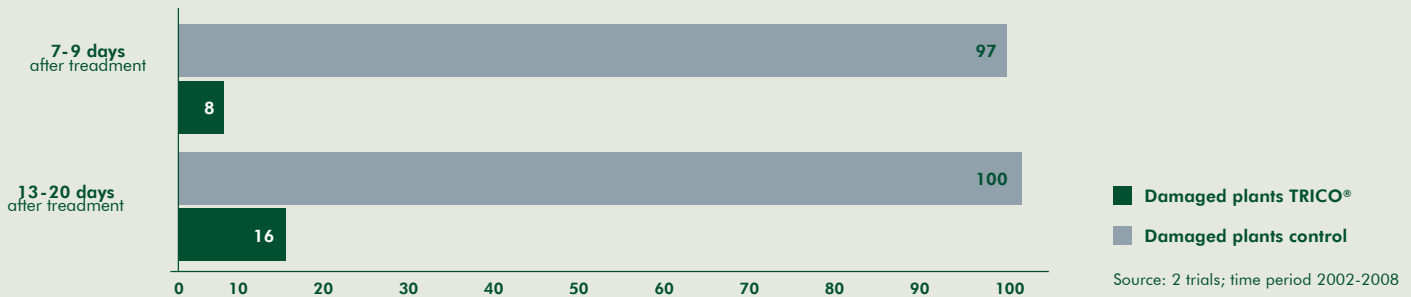

In vineyards, early plant growth is especially susceptible to damage caused by deer. Game browsing can delay plant growth, which can have long-term effects on yield and quality. In severe cases, a young vine may require replanting. Use TRICO® any time before flowering to deter deer from browsing the foliage.

# Soybean Crop Protection

Soy crops are particularly favorable for foraging deer due to its high protein content. In the past growers in high deer density areas switched to other crops to minimize the ingress of deer. Now with TRICO®, growers no longer need to find alternative crops to avoid deer browse. This effective solution eliminates browse or damage to agricultural plants.
